How to use Volatility Processor

Firstly go to you can download **DumpIt** http://qpdownload.com/dumpit/ if you do not have it already. The second thing you need to do is to download **Volatility** at http://www.volatilityfoundation.org/26) website. Then go to the releases page of this repository and download the **RAMCollector.exe** and **VolatilityProcessor.zip**. Make sure to put **RAMCollector.exe** and **DumpIt** executable in the same directory. Extract **VolatilityProcessor** into the Autopsy Python Modules folder. You can find that folder by clicking on Tools->Python Plugins in Autopsy. If you do not already have Autopsy you can download it from [here](https://www.sleuthkit.org/autopsy/download.php).
